Subject: RE: Plume Monitoring Today

Bob/Dave,

Paul spoke with the captain, who indicated they hadn't started dredging at Niemiec yet but were planning to start soon and still anticipated having a disposal dump Wednesday morning. The captain asked that we check back in at 4PM to confirm.

The captain confirmed that dredging at Niemiec would continue through Thursday...and possibly Friday depending on today's progress.

Bottom line is that disposal of Niemiec material is anticipated for Wednesday and Thursday of this week. Friday is a possibility too, but it could be mixed material (Niemiec plus some other area).

Battelle is available to conduct plume tracking Wednesday and Friday, but not Thursday due to other survey commitments.

Please advise if you want us to be in the field tomorrow to conduct plume tracking. If so, we need to start mobilizing by 2:30PM.

Thank you,
Deirdre

thanks Deirdre - it would probably make sense to confirm this with him/her today. I'm leaning towards doing this last round at Niemiec

(bird in hand kind of thing) but am trying to see how much time we have to make a final decision. i.e., the city may have better information this week about whether they can afford Packer...

RE: Plume Monitoring Today

The dredge boat captain indicated last Friday that dredging at Niemiec would occur this Tuesday and Wednesday, with disposal on Wednesday and Thursday.

All - I'm waiting for a call-back from Kristin Decas at the HDC to get her take on the prospects for dredging at Packer...

Do we know if this week's dredging at Niemeic will occur all week?

RE: Plume Monitoring Today

Bob/Dave,

The attached communication from Apex confirms that the material disposed Wednesday, May 20 was from Niemiec. Battelle observed this disposal event and collected tox samples (testing in progress).

We understand that dredging will continue this week at Niemiec. Please advise if additional disposal monitoring of Niemiec material is necessary, or should we continue as planned to save one last monitoring day for monitoring the disposal of Packer material?

Deirdre

All - this may change our strategy wrt to Packer, i.e. if we have enough funds for another round we should probably use it for Neimeic (for real!!) in case Packer turns out to be a no go. The only thing that might change this is if Wednesday's event was in fact Neimeic.

And we'd have to build in a double check loop to make sure we're doing Neimeic...

Dave

Plume Monitoring Today

Dave:

I just spoke to Deirdre about the plume monitoring today. The good news is that Battelle was able to monitor the plume and received good signals. The unsettling news is that the Boat Captain told Paul Dragos that the sediment did not come from Niemiec. It came from somewhere else. Paul is going to talk to the Captain later today with map in hand to understand where the material came from. Of course the question of where yesterday's dump sediment came from. The Captain wasn't sure.

Do you know where the dredged material that was dumped today came from? If your contact is knowledgeable, can you ask them about yesterday's dredged material as well?

Tx

Bob

Dave,

Unfortunately, our contractor has been relatively hard to predict with regard to what areas he plans to dredge on any particular day. We will often be told that they are going to dredge in one location, and then they will move to another without telling us. We are trying to keep Battelle in the loop with regard to the location of the contractor. We gave Paul Dragos the dredge captain's phone number, so Battelle could keep in direct contact with him and receive the most updated information directly from the person making those decisions, as they tend to change frequently. It appears that there may have been a miscommunication between Mr. Dragos and the dredge captain.

In this case, Mr. Niemiec asked the contractor to leave his location on Wednesday until early next week due to a backlog of launching at his boat ramp. The contractor moved to the Gifford Street boat ramp location and says that they do not plan to return to Niemiec until Tuesday of next week.

The contractor dredged at Niemiec on Monday and Tuesday, but then moved

to
the Gifford Street area on Wednesday. As a result, the dump on
Wednesday was
Niemiec material, but the dump on Thursday was Gifford Street material.

We are sorry for the confusion, and are trying our best to keep Battelle
up
to date.

Thanks,

Chet Myers, PE, LSP

Chet and Jay - can you help us with the question below (which areas
were placed into the CAD cell on Wed and Th?? We were hoping to do our
plume tracking on the Neimiec material since its close to Superfund
dredge
areas, but apparently this was not the case.

Dave
